|  | $O$ | $N$ | $E$ |
| :---: | :---: | :---: | :---: |
| + | $O$ | $N$ | $E$ |
|  | $T$ | $W$ | $O$ |

A solution to make the calculation work would be:
$\begin{array}{lll}O=4 & N=3 & E=2 \\ T=8 & W=6 & \end{array}$

|  | 4 | 3 | 2 |
| :--- | :--- | :--- | :--- |
| + | 4 | 3 | 2 |
|  | 8 | 6 | 4 |

How many different ways can you find?
There are at least 16 so see how close to 16 you can get!
